Priority

3. Acknowledgment is made of applicant's claim for foreign priority based on an application filed in Sweden on October 4, 2001. It is noted, however, that applicant has not filed a certified copy of the foreign application as required by 35 U.S.C. 119(b).

Claim Rejections - 35 USC § 112

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claim 18 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 18 recites the limitation "the toothed rack" in line 3. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 3721

A person shall be entitled to a patent unless –(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

7. Claims 4-18 are rejected under 35 U.S.C. 102(b) as being anticipated by Hiroi et al. (USPN 5,230,457).

In reference to claims 4-18, Hiroi et al. discloses a method for controlling an electric stapler, the method comprising: arranging a sensor (13) for detecting positions of a staple driver (105) during a stapling process; utilizing a microprocessor (301; column 5, lines 14-17) to analyze speed (figure 15) and sensed positions of the staple driver (105) and controlling the positional changes of the staple driver (105) by supplying controlled magnitudes of electrical current to an electric drive motor (10) on a real time basis (column 5, lines 42-57); the electric drive motor (10) having a drive shaft (figure 3) interconnected to the staple driver (105) via at least one toothed gear (7, 11) and reversing the drive shaft at the completion of a stapling action (column 5, lines 27-36).

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Refer to attachment for notice of references cited and recommended for consideration based on their disclosure of limitations of the claimed invention..
